WHAT IS ARTIFICIAL INTELLIGENCE?
Artificial intelligence, or AI for short, is a computer system that can do things in a human-like way. But getting computers to 'act and think like us isn't easy'!

WEAK (NARROW) AI
• **WEAK (NARROW) AI** is designed to perform a specific task, such as playing chess or recognizing faces. It is the most common type of AI.

STRONG (GENERAL) AI
• **STRONG (GENERAL) AI** is designed to perform any intellectual task that a human can do. It is still a theoretical concept.

HOW DO WE USE AI?
• **AI in medicine:** AI can help doctors diagnose diseases and recommend treatments.
• **AI in education:** AI can personalize learning and provide extra help when needed.
• **AI in transportation:** AI can help control traffic and make roads safer.
